

## **RS4000 Servo Motor Assembly**

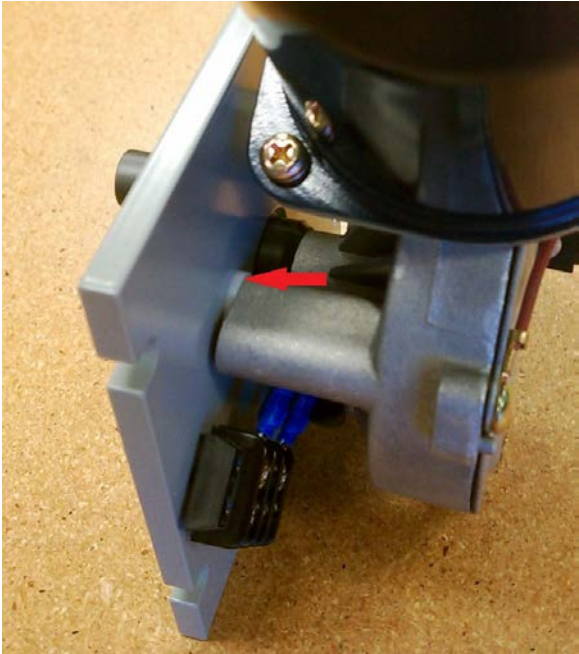

### **Part # 40281**

Assembly includes new motor (pre-wired), drive arm, mounting plate, terminal strip, motor to mounting plate isolators and drive arm to crank isolator all preassembled and ready for installation.

### **Advantages to purchasing the complete motor assembly:**

- No assembly required, so no chance of losing parts in the field.
- All new isolators are installed between the motor and mounting plate.
- New isolator for crank arm provided.
- New terminal strip ensures clean electrical connections.
- Drops onto the servo quickly and easily.

**The pictures above show you the isolators (red arrows) that MUST be in place and in good physical shape when a new motor is installed. Without these isolators you will blow the motor fuse in your panel every time the servo moves in one direction.**
